SUMMARY

MERN stack developer with a strong focus on crafting seamless, end-to-end web applications using MongoDB, Express, React, and Node.js. Adept at blending dynamic front-end interfaces with efficient back-end services, ensuring optimized database management and robust API integrations. Passionate about delivering clean, scalable solutions and driving innovation.

EXPERIENCE

Druv360°
Junior MERN Stack Developer

Ernakulam, kerala
Sep. 2024 - Feb. 2025

- Developing, testing, and maintaining scalable web applications using the MERN (MongoDB, Express.js, React.js, Node.js) stack.
- Designing and implementing RESTful APIs enables seamless communication between front-end and back-end systems
- Building responsive and user-friendly interfaces using React.js and integrating them with server-side logic.
- Managing and optimizing databases using MongoDB for efficient data storage and retrieval.
- Debugging and resolving technical issues to ensure smooth application performance.
- Collaborating with cross-functional teams to deliver high-quality software solutions.

PROJECTS

Job Portal

The Website that manages job postings, receives applications, and creates a hiring workflow for these applications. It is built using the MERN stack

Full Stack E-Commerce Website

A Website with product filtering, cart, and Stripe payments. Users can order with a delivery address. Admins manage products via a dashboard. Built using MERN stack.

Blog App

Developed using React js with responsive design. The website developed for users to create, share, and manage their own blogs.
